1. WELCOMING MESSAGE

Dear CSIS1664 Student,

Welcome to *Introduction to the Internet and Web Development*! You are about to begin an exciting journey into the world of the World Wide Web, a space that continues to shape how we live, learn, and communicate.

Over the next few months, we will explore how the Internet works, how websites are built, and how to design well-structured, accessible, and visually appealing static websites using HTML and CSS. While we can't cover every emerging technology in just one semester, this module will give you a strong foundation in key concepts and practical skills that will serve you well in more advanced courses and real-world applications.

CSIS1664 is presented in a blended learning format. This means that your learning will happen through a combination of interactive contact sessions and online activities. Class activities (both individual and group-based) and weekly individual assignments will form an essential part of your learning experience. These will help you to gradually build your skills and confidence in web development.

To succeed in this module:

- Attend all lectures and practical sessions.
- Prepare before each session so you can participate actively.
- Keep up to date with weekly tasks and check Blackboard regularly.
- Ask questions and seek help early if you're unsure about anything.

Most importantly, enjoy the learning process. Web development is both a technical and creative pursuit and there's no better way to learn than by doing. I look forward to seeing how you apply what you learn in ways that are meaningful and relevant to you.

If you encounter any challenges along the way, please reach out to me sooner rather than later. Support is available, and we're here to help you succeed.

Wishing you a productive and rewarding semester!

Warm regards,
Prof Liezel Nel
Lecturer

2. CONTACT INFORMATION

For module-related queries or assistance, you should contact the Lecturer:

LECTURER	
Name:	Prof Liezel Nel
Office number:	[redacted]
Email address:	[redacted]
Phone number:	[redacted]
Consulting hours:	[redacted]

For administrative queries or assistance, you can contact the Departmental Secretary:

SUPPORT STAFF	
Name:	Me. Sanah Mocwana
Office number:	[redacted]
Email address:	[redacted]
Phone number:	[redacted]
Consulting hours:	[redacted]

For academic concerns or escalations beyond the module level, please contact the Head of Department:

HEAD OF DEPARTMENT (HOD)	
Name:	Prof. Eduan Kotzé
Office number:	[redacted]
Email address:	[redacted]
Phone number:	[redacted]
Consulting hours:	[redacted]

3. MODULE DESCRIPTION

The aim of CSIS1664 is to make you fully conversant with the technical aspects of the Internet as well as the techniques and markup languages that are used to develop well designed static web sites.

After successful completion of this module, you will be able to:

- Demonstrate knowledge of the evolution and working of the Internet;
- Conduct efficient Internet searches; and
- Use HTML, CSS, and client-side scripting to develop a complete static website.

In addressing the module outcomes, the following learning units will be covered in this module:

Learning unit 1:	Introduction to the Internet and the WWW
Learning unit 2:	Introduction to HTML and Cascading Style Sheets
Learning unit 3:	Introduction to web design
Learning unit 4:	Introduction to Bootstrap

This module has 16 credits - requiring 160 notional learning hours from you. '*Notional learning hours*' indicate the amount of learning time taken by the 'average' student to achieve the specified learning outcomes of the course unit or programme. This includes all learning relevant to achieving the learning outcomes, e.g., directed study, essential practical work, group work, private study, preparation and assessment.

In terms of prerequisites, you must have passed CSIS1614 OR obtained a minimum of 60% for NSC IT (Grade 12) in order to continue with this module.

4. GRADUATE ATTRIBUTES

This module will contribute to the development of the following UFS graduate attributes:

- **Critical Thinking:** Students are encouraged to critically evaluate web content and design principles, assess the credibility of online information sources, and make informed decisions about layout, usability, and accessibility in web development.
- **Problem Solving:** Through weekly practical assignments and design challenges, students will identify and solve coding and layout issues using HTML and CSS, apply logic to debug errors, and implement creative solutions in the development of a static website.
- **Oral Communication:** During group discussions, tutorial sessions, and class discussions, students will have opportunities to explain technical concepts, justify design decisions, and collaborate effectively with peers.
- **Written Communication:** Students will practice professional written communication by documenting their design processes, providing comments in code, and completing reflective tasks related to web development practices.
- **Community Engagement:** By designing websites around topics that are socially relevant or meaningful to them, students will begin to consider the role of technology in community awareness, accessibility, and the broader impact of digital solutions.
- **Ethical Reasoning:** Emphasis is placed on academic integrity, responsible use of Generative AI tools, and ethical coding practices. Students are guided to produce original work and critically reflect on the implications of technology in society.
- **Entrepreneurship and Employability:** Students gain hands-on experience with industry-relevant tools and techniques in web development to enhance their digital portfolio and employability. The final website project can serve as a showcase of their skills to potential employers or clients.

5. MODULE SCHEDULE

The module stretches over a 14-week period, during which the following programme will be followed:

Week	Month	Dates	Description
1	July	13 – 17	3 Lectures + No Practical
2	July	20 – 24	3 Lectures + 1 Practical
3	July	27 – 31	3 Lectures + 1 Practical
4	August	03 – 07	3 Lectures + 1 Practical
5	August	10 – 14	2 Lectures + 1 Practical **10 Aug: Women's Day (Observed)**
6	August	17 – 21	3 Lectures + 1 Practical
7	August	24 – 28	3 Lectures + No Practical **26 Aug: 1st Module Exam**
8	Aug/Sept	31 – 04	3 Lectures + 1 Practical
9	September	07 – 11	3 Lectures + 1 Practical
10	September	14 – 18	3 Lectures + 1 Practical
11	September	21 – 25	3 Lectures + No Practical **24 Sept: Heritage Day** **25 Sept: UFS Senate Holiday**
UFS Recess: 28 September – 2 October			
12	October	05 – 09	3 Lectures + 1 Practical
13	October	12 – 16	3 Lectures + No Practical **14 Oct: 2nd Module Exam**
14	October	19 – 23	1 Lecture on 20 October No Practical **21 Oct: Aegrotat Assessment**
Main End-of-year Examination: 26 October – 14 November			
Supplementary End-of-year Examination: 16 – 21 November			

6. HOW LEARNING WILL TAKE PLACE

Attendance of all contact sessions (theory and practical) is compulsory. Assistance will be available during practical sessions. Weekly tutorial sessions will also be scheduled after consideration of students' timetables. You will be largely disadvantaged if you miss a class. Do not get behind with the work! Contact the lecturer or assistant/tutor in time if you have any problems with the work. **Only registered students will be allowed to attend the CSIS1664 contact sessions.**

	Monday (Lecture 1)	Tuesday (Lecture 2)	Wednesday (Practical)	Friday (Lecture 3)
Lectures	07h10 – 08h00 MODLEC Lab B3	11h10 – 12h00 MODLEC Lab B3		07h10 – 08h00 MODLEC Lab B3
Practical			**Session A:** 14h10 – 17h00 AGRI labs **OR** **Session B:** 17h10 – 20h00 AGRI labs	

7. STUDY MATERIALS

The prescribed textbook in this module is:

Murach's HTML and CSS (6th edition)
Zak Ruvalcaba, Anne Boehm & Mary Delamater
Publisher: Mike Murach & Associates, Inc.
2024
ISBN: 978-1-943873-21-2

In addition to the textbook, other study material will be used as part of the teaching and learning in this module. This material and activities will be made available on Blackboard throughout the semester. It is your own responsibility to ensure that you obtain and prepare all study material in time.

No specialised software is required to complete this module.

8. ASSESSMENT OF LEARNING

The CSIS1664 semester mark will be determined based on your marks for the weekly practical assignments, two module examinations as well as your participation in various class and online activities (see Section 8.1).

8.1 Assessment breakdown

Your semester mark (predicate) will be calculated as follows:

Assessment	Format	Date	Contribution: Semester Mark	Time / Venue
Module Exam 1	Online / Practical	26 Aug	30%	14h00 – 17h00 & 17h10 – 20h10 AGRI Labs
Module Exam 2	Online / Practical	14 Oct	40%	14h00 – 17h00 & 17h10 – 20h10 AGRI Labs
Assignments	Online / Practical		10%	Weekly
Website Project	Practical		10%	Throughout Semester
Class and Online participation			10%	During contact sessions
Aegrotat Assessment	Online / Practical	21 Oct		17h00 – 20h00 AGRI Labs
Final Examination	Online / Practical	Oct/Nov		

The CSIS1664 semester marks will be made available on Friday, 23 October 2026 on the UFS Student Portal. No marks will be provided over the telephone. All module assessments and assignments must be completed by Wednesday, 21 October 2026. If not, your module will be marked "incomplete", and you will not gain access to the exam.

8.2 Assignments

More detailed assignment information will be made available on Blackboard throughout the semester. It is your own responsibility to ensure that you take note of all the information and aligns yourself with the expectations.

All assignments are compulsory. No late submissions will be accepted (unless stated otherwise). Your module will be marked incomplete if you do not complete all the assignments to the satisfaction of the lecturer.

No co-operation whatsoever between students is allowed. You may only submit your own work. Work created by or through inappropriate use of GenAI tools will not be accepted. Disciplinary action will be taken against students found guilty of any transgression in this regard. Action will also be taken against students who help or allow other students to copy their work for individual assessments. The only exception to this rule is when assignments are classified as group assignments. (Also refer to the Departmental Disciplinary Code on Blackboard.)

It is your own responsibility to keep backup copies of your assignments. Lost or corrupted computer files, network problems, etc., cannot be used as an excuse for late submissions.

8.3 Aegrotat assessment

The Aegrotat Assessment Policy of the Department of Computer Science and Informatics (CSI) will be applied strictly. This policy is available on Blackboard.

Please note:

- Should you qualify for the aegrotat assessment but fail to show up at the specified date, time and place, no additional module assessments will be drawn up.
- Participation in sport, cultural activities, the attendance of weddings, or transport problems etc. are not valid reasons for absence during module assessments and will not justify qualification for an aegrotat assessment.
- No member of the Student Representative Council or House Committee may give you permission to miss an assessment.
- There will be only one aegrotat assessment, which will take place on **21 October 2026**. This assessment will cover all the work of the semester.

8.4 Incomplete

Failure to write/do any of the module assessments (i.e. practical assignments or module exams/tests) while not handing in a valid original or certified doctor certificate (within 48 hours after the assessment), will result in CSIS1664 being indicated as incomplete next to your student number. This implies that you will not be admitted to the final examination and that you will not be allowed to register for the module again (which could in effect mean the end of your studies at UFS).

CSIS1664 will also be indicated as incomplete next to your student number in any of the following cases:

- If you did not attend at least 80% of all face-to-face contact sessions (theory and practical).
- If you fail to submit any compulsory assignment.
- If you fail to write both module exams (or the aegrotat assessment instead of one module exam).

8.5 Promotion

The UFS promotion system applies to this module. Students who obtain a semester mark of 70% or higher with a subminimum of 60% in each of the different assessment components as well as class attendance of at least 80% (see Section 8.1) will be promoted and will not have to write the final examination. If you qualify to promote the module, the semester mark will count as your final mark.

8.6 Final Examination

Only students with a semester mark of 45% or higher will be allowed access to the exam. The main and supplementary examination will be in the format of a 3-hour practical exam.

8.7 Calculation of the Final Mark

In terms the rule book of the Faculty of Natural and Agricultural Sciences, the final mark of this module is calculated as follows: 50% *of the semester mark plus* 50% *of the examination mark.*

8.8 Passing the Module

You must obtain a final mark of 50% or more in order to pass this module. In addition, a sub-minimum examination mark of 40% is required.

8.9 General Rules

Marks for tests, examinations, and practical assignments may be held back if required so by the Administration of the University in cases where students are not registered for the module or have outstanding fees.

Students who accumulate less than 64 credits per year will not be allowed to continue with their studies. Students who receive an *Incomplete* (see Section 8.4) or a semester mark of less than 30% for a module will not be allowed to repeat that module.

9. POLICIES AND EXPECTATIONS

9.1 Academic Integrity and Departmental Disciplinary Code

All students enrolled in CSIS1664 must uphold the highest standards of academic integrity. You are expected to submit work that reflects your own understanding, effort, and creativity. Acts of academic misconduct (such as plagiarism, collusion, or misrepresentation) will not be tolerated. The CSI Department maintains a strict Disciplinary Code, available on Blackboard, which outlines the consequences of dishonest conduct.

In this module, you will complete regular practical assignments and assessments. Unless explicitly indicated as group work, all submissions must be completed individually. Any sharing or copying of code, even with slight modifications, will be regarded as academic misconduct and may lead to disciplinary action for all parties involved.

9.2 Responsible Use of Generative Artificial Intelligence (GenAI) Tools

Generative AI tools, such as ChatGPT, Claude, GitHub Copilot, and others, are rapidly transforming how we learn and work. In CSIS1664, the use of GenAI tools is subject to strict conditions and will only be permitted if the assignment instructions explicitly state that GenAI use is allowed. If an assignment does not mention GenAI, you must assume its use is not permitted.

When permitted, the following rules apply:

- **Assignment-Specific Permission:** The use of GenAI tools is only allowed if explicitly permitted in the assignment specifications. Unauthorised use will be treated as a breach of academic integrity.

- **Transparency**: Any use of GenAI in your assignments or code must be clearly documented in a comment or reflective paragraph, stating the tool used and how you used it.
- **Critical Engagement**: You are responsible for reviewing, understanding, and adapting any AI-generated content. Submitting unmodified output is not allowed.
- **Ownership of Work**: All submissions must reflect your own comprehension of the material. If you cannot explain the logic or structure of your work, it will be assumed that you did not create it.
- **Referencing**: If you incorporate external code (whether AI-generated or from tutorials/websites), include an appropriate reference or URL in a comment, along with a brief description of how you adapted it.

Failure to comply with these guidelines may result in an academic misconduct investigation.

9.3 Participation and Attendance

CSIS1664 is a blended-learning module consisting of face-to-face lectures, hands-on practicals, and online activities. Your consistent engagement in all three components is crucial for success.

- **Attendance** of at least 80% of contact sessions is required. If you fail to meet this requirement, your module will be marked as “Incomplete” and you will not be eligible for the final examination.
- **Preparation** before classes and practicals is expected. This enables deeper engagement with the content and supports peer collaboration during group tasks.
- **Online participation** in Blackboard activities, announcements, and submissions must be maintained weekly.

9.4 Staying Up to Date with Coursework

The module follows a week-by-week progression with practical assignments building toward your final website project. Falling behind compromises your ability to meet the learning outcomes.

- All students must remain up to date with weekly assignments. If you fail to keep to the stated deadlines, your module will be marked as “Incomplete”.

- It is your responsibility to track due dates, check Blackboard regularly, and act promptly on feedback.

9.5 Communication and Conduct

Professionalism is expected in all forms of communication (whether in class, via email, or on online platforms).

- Questions about assignments or course content should be asked early. Do not wait until submission deadlines.
- Always use your UFS email account for official correspondence, and clearly identify yourself when emailing the lecturer or support staff.
- Respectful and constructive behaviour is expected during all interactions with fellow students and staff.

By enrolling in CSIS1664 you acknowledge and agree to these policies. If anything is unclear or you need further clarification, speak to the lecturer.
